

Laboratorio Azure Database for MySQL y Postgres

1. Ingresar a la suscripción con el azure pass
2. Crear un Resource Group llamado Lab_Azure_Database
3. Crear una máquina virtual en el grupo de recursos creado, así: Clave Ms1234567890

Azure VMs have one operating system disk and a temporary disk for short-term storage. You can attach additional data disks. The size of the VM determines the type of storage you can use and the number of data disks allowed. [Learn more](#)

DISK OPTIONS

* OS disk type ⓘ

Standard HDD

The selected VM size supports premium disks. We recommend Premium SSD for high IOPS workloads. Virtual machines with Premium SSD disks qualify for the 99.9% connectivity SLA.

DATA DISKS

You can add and configure additional data disks for your virtual machine or attach existing disks. This VM also comes with a temporary disk.

LUN	NAME	SIZE (GIB)	DISK TYPE	HOST CACHING

Ingreso al servidor

Ingresar al servidor usando Azure Cloud Shell con el usuario **laboratorio**, la clave **Ms1234567890** y la ip de la maquina creada.

```
ssh laboratorio@<ip>
```

Descargar desde github el código de configuración de sitio web de prueba

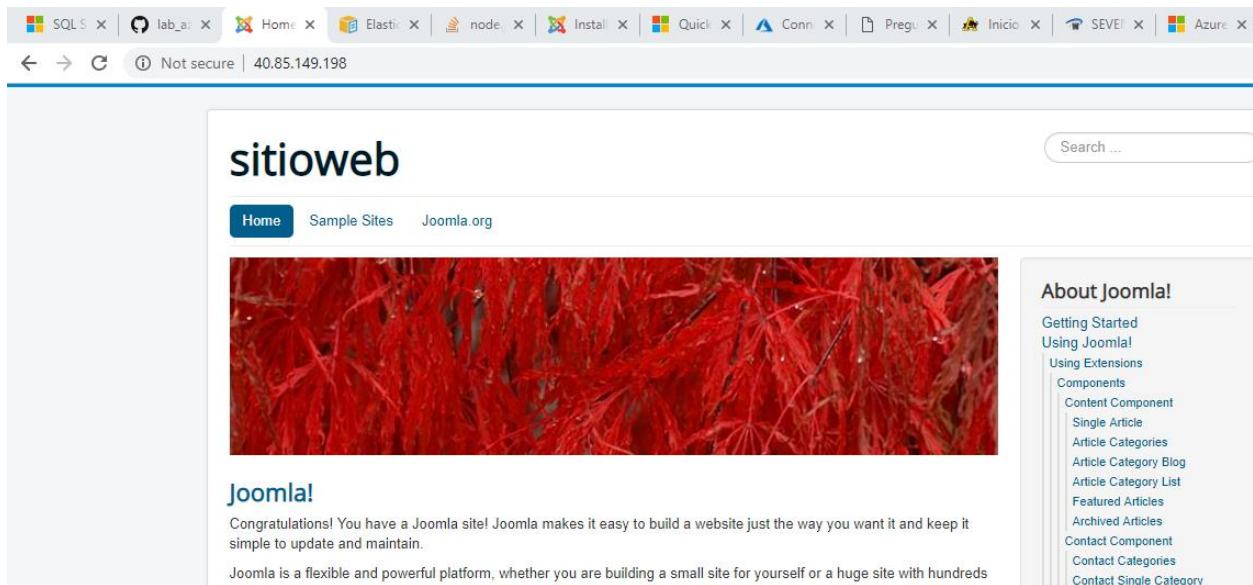

git clone https://github.com/juansesin/lab_azure.git

Ingresa a la carpeta lab_azure y ejecute el comando configurar.sh

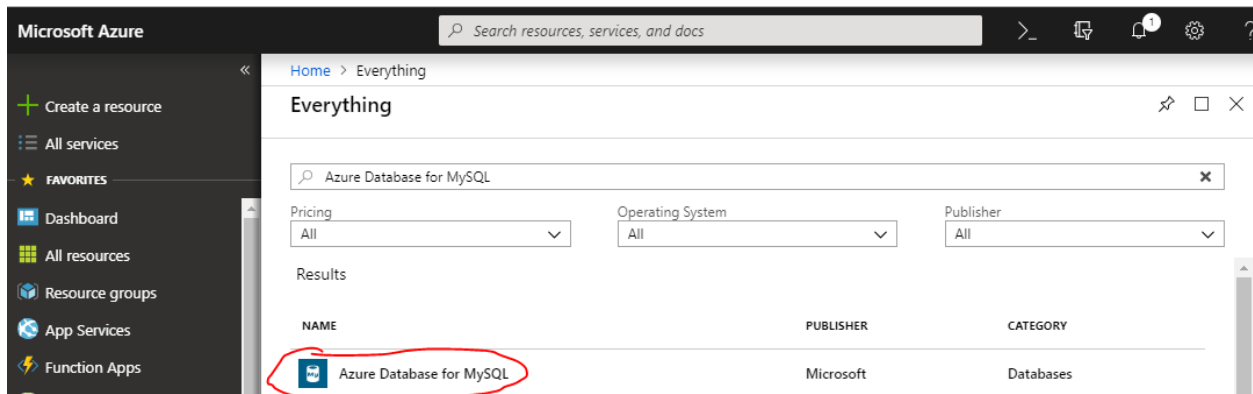

```
./configurar.sh
```

Verifique en un navegador

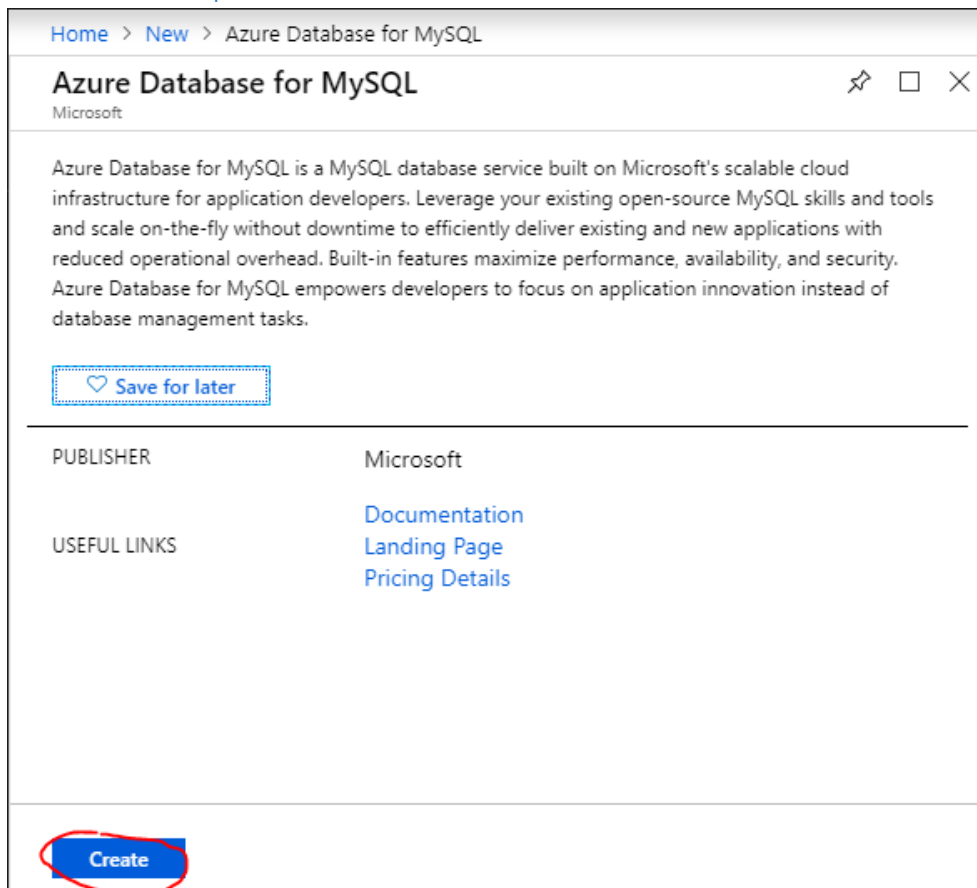

Ingresa en la URL del navegador la ip de su servidor web.

Crear un servidor de Azure Database for Mysql

Seleccione la opción Create

Diligenciar los datos para crear la base de datos

1. Nombre del servidor de bd
2. Elija la suscripción
3. Admin -> laboratorio

- Clave -> Ms1234567890
- Elegir el servidor con menores características

Firewall rules

Some network environments may not report the actual public-facing IP address needed to access your server. Contact your network administrator if adding your IP address does not allow access to your server.

Allow access to Azure services **ON** OFF

RULE NAME	START IP	END IP
sitioweb1	190.93.156.170	190.93.156.170
sitioweb	40.85.149.198	40.85.149.198

VNET Rules + Adding existing virtual network + Create new virtual network

RULE NAME	VIRTUAL NETWO...	SUBNET	ADDRESS RANGE	ENDPOINT STAT...	RESOURCE GROUP	SUBSCRIPTION ID	STATE
No results							

SSL settings

Enforcing SSL connections on your server may require additional configuration to your applications connecting to the server. Click here to learn more.

Enforce SSL connection **ENABLED** DISABLED

Desde el servidor Linux debemos conectarnos a la base de datos así:

```
mysql -h dbsitioweb.mysql.database.azure.com -u laboratorio@dbsitioweb -pMs1234567890
```

Ejecute los siguientes comandos para crear la base de datos nueva y el usuario:

```
create database sitioweb;
```

```
CREATE USER 'us_sitioweb'@'localhost' IDENTIFIED BY 'password';
```

```
GRANT ALL PRIVILEGES ON sitioweb.* TO 'us_sitioweb'@'localhost';
```

Cargue la copia de la base de datos

```
mysql -h dbsitioweb.mysql.database.azure.com -u laboratorio@dbsitioweb -pMs1234567890
sitioweb < sitioweb.sql
```

Debemos cambiar en el archivo /var/www/html/configuration.php las variables de conexión a la base de datos:

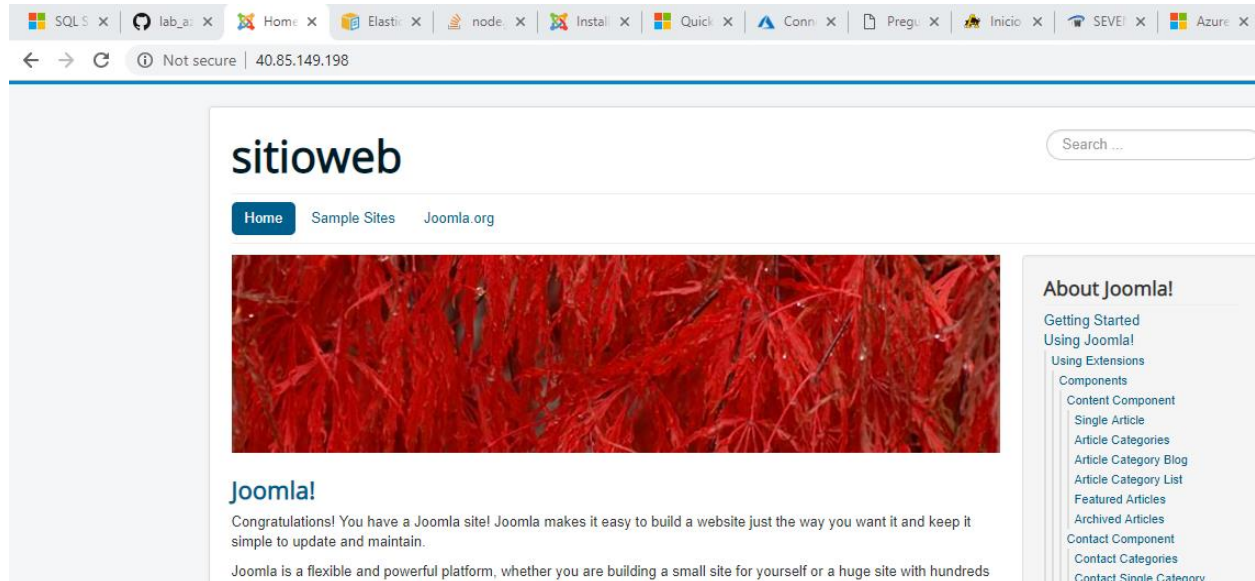

```
public $host = 'dbsitioweb.mysql.database.azure.com';
```

```
public $user = 'laboratorio@dbsitioweb';
```

```
public $password = 'Ms1234567890';
```

```
public $db = 'sitioweb';
```

Verifique el correcto funcionamiento del sitio web con la base de datos migrada a Azure.
Ingresa en la URL del navegador la ip de su servidor web.

Montaje sitio web en Azure Database for Postgres

Crear un nuevo Azure Database for Postgres siguiendo las mismas instrucciones que usamos para crear el Azure Database for MySQL.

Ir a la ruta /var/www/html

```
cd /var/www/html
```

Crear una carpeta llamada postgres

```
mkdir postgres
```

Mover el archivo joomla.tar.gz a la carpeta postgres

```
mv joomla.tar.gz postgres
```

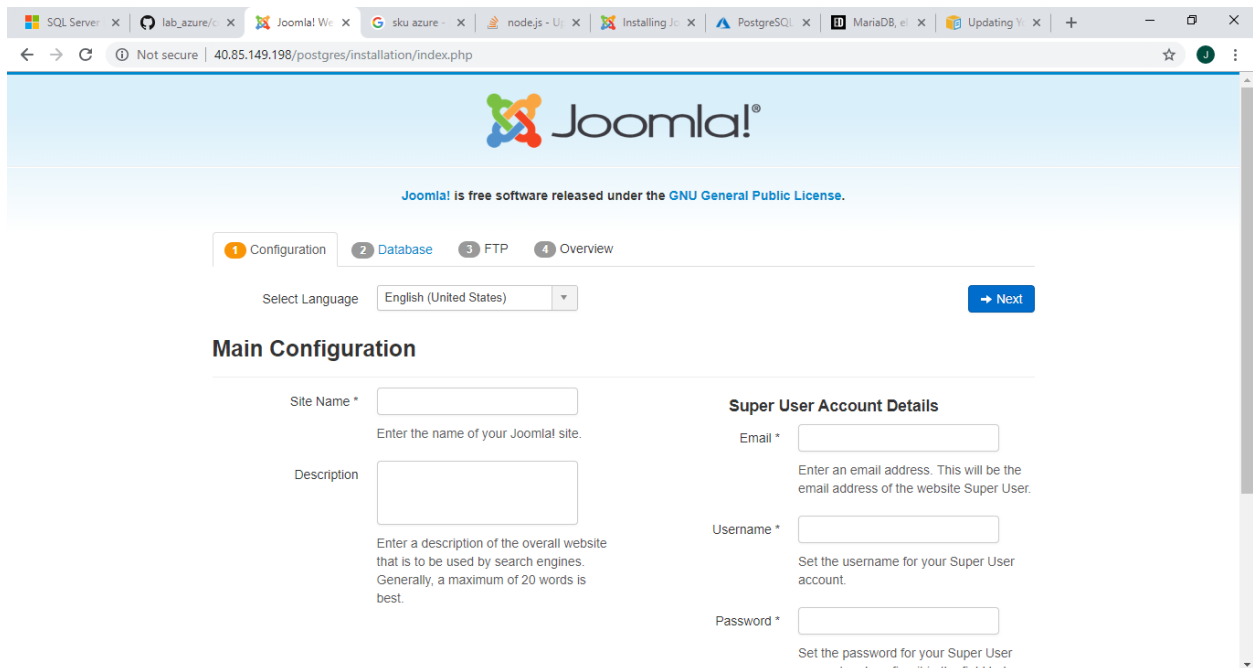

Pasarse a la carpeta postgres

```
cd postgres
```

Descomprimir el archivo joomla.tar.gz

```
tar xvf joomla.tar.gz
```

Ingresar al browser con la dirección ip del servidor web seguido de postgres y seguir los pasos de instalación de joomla con la información de la base de datos postgres que acabamos de crear.

The screenshot shows the Joomla! installation interface in a web browser. The address bar indicates the URL is 40.85.149.198/postgres/installation/index.php. The Joomla! logo is at the top, followed by the text "Joomla! is free software released under the GNU General Public License." Below this is a progress bar with four steps: 1 Configuration (active), 2 Database, 3 FTP, and 4 Overview. A language selector is set to "English (United States)" with a "Next" button. The "Main Configuration" section contains two columns of form fields. The left column has "Site Name *" and "Description" fields. The right column has "Super User Account Details" with "Email *", "Username *", and "Password *" fields. Each field has a placeholder text explaining its purpose.
